Professional Summary

Software engineer building web and mobile products from requirements and system design through deployment and ongoing support. Experience spans full-stack development, multi-tenant SaaS, applied AI, and infrastructure automation. Works directly with clients, makes technical decisions, and handles production troubleshooting, with an emphasis on maintainable software and verification of delivered functionality.

Professional Experience

IT Staff – Systems & Web Administration (Contract) Aug 2025 – Present
LPPM, Universitas Syiah Kuala | Banda Aceh, Indonesia

- Restored publishing services supporting 80+ academic journals within hours of receiving production server access after a malicious-script incident; checks detected no new data loss.
- Administer five Linux VMs for Publications, Jurnal, Conference, Academic Journals, and Proceedings; provision Open Journal Systems (OJS), configure servers, and maintain databases and user access.
- Removed persistent backdoors from the legacy OJS 2 platform and hardened application and server configurations; validate recovery through service checks and database and file-integrity audits.
- Built 15-minute health monitoring, daily security and integrity checks, tiered backups, and Telegram alerts; verify backup integrity using checksums.
- Redesigned publishing and journal portals and the Annual International Conference (AIC) website, including WordPress theming and responsive interfaces.

Freelance Software Engineer 2024 – Present
Independent Clients | Remote | Joki IT since Jul 2026

- Develop web and mobile applications for direct clients and Joki IT engagements, covering requirements, interfaces, backend services, data flows, and integrations.
- Handle Linux configuration, automation, and model-training tasks as required; prepare staging builds, validate outputs, and incorporate client feedback.

Full-Stack Developer Intern Jun 2024 – Jul 2024
BMKG Aceh Besar | Aceh Besar, Indonesia

- Built an employee leave management application with React, Tailwind CSS, Express.js, and MySQL, covering employee and administrator workflows.
- Implemented leave-balance tracking and automated PDF approval letters.

Practicum Instructor Feb 2024 – Dec 2024
Universitas Syiah Kuala | Banda Aceh, Indonesia

- Taught 44 Web Programming students and 41 Software Engineering students across 16 sessions per course; published supporting web-programming materials.
- Guided hands-on DevOps labs covering CI/CD, Docker, Google Cloud Platform deployment, and backup practices.

Selected Projects

Gilir Independent SaaS – Public Release
Next.js, TypeScript, Supabase, PostgreSQL, Docker, Coolify, Mayar

- Built a multi-tenant barbershop SaaS from concept to deployment, with per-shop subdomains, configurable themes, and workspaces for owners, cashiers, barbers, and customers.
- Connected bookings, walk-ins, real-time queues, schedules, checkout, and reporting; used PostgreSQL Row Level Security for tenant-scoped data.
- Integrated Mayar subscription payments and completed a production payment test; deployed containerized services with Coolify.

RWikiStat Undergraduate Thesis
React Native, Expo, Firebase, Node.js, Express.js, AWS EC2

- Developed the iOS statistics learning app, maintained Android/web components, and deployed its backend on AWS EC2; supported learning modules, R-code practice, and discussions.
- Evaluated usability with 22 Statistics students, recording an 88.26% UMUX score. Previously published on the Apple App Store.

Presence Attendance MVP
Next.js, Supabase, pgvector, face-api.js

- Built face verification with browser-generated embeddings and server-side vector matching, shift scheduling, live monitoring, and PDF reports; head-movement liveness is a demo-grade gate.

LacakKarirku Independent Web Application
Next.js, TypeScript, Neon PostgreSQL, Drizzle ORM, Groq

- Built PDF CV parsing, multi-source job aggregation, heuristic CV-to-job matching, LLM-assisted suggestions, and application tracking with notes and follow-up dates.

Image Classification & Sentiment Analysis Dicoding Course Projects
Python, TensorFlow/Keras, scikit-learn, NumPy, pandas

- Prepared image and text data, trained a six-class CNN, and compared BiLSTM, Conv1D, and TF-IDF/LinearSVC sentiment models using held-out evaluation.

Education & Training

Master's Program in Artificial Intelligence Aug 2026 – Present
Universitas Syiah Kuala

Bachelor of Informatics – Cum Laude Aug 2021 – Aug 2025
Universitas Syiah Kuala | GPA: 3.74 / 4.00

Bangkit Academy – Android Learning Path Feb 2024 – Jun 2024
Independent Study (Kampus Merdeka) | Remote
One of two mobile developers on a seven-person MediGuide capstone team; built Kotlin interfaces and integrated backend and machine-learning services.

Technical Skills

Languages: TypeScript, JavaScript, PHP, Python, SQL, Kotlin, C#.
Web & APIs: React, Next.js, Node.js, Express.js, Laravel, WordPress, Tailwind CSS, REST APIs.
Mobile: React Native, Expo, Android development, Firebase.
Data & ML: PostgreSQL, MySQL, Supabase, Drizzle ORM, pgvector, TensorFlow/Keras, scikit-learn, LLM APIs.
Infrastructure: Linux, Docker, Coolify, AWS EC2, GCP, GitHub Actions, CI/CD, backups, monitoring.
Development Tools: Git, GitHub, Figma.
AI-assisted Development: Agent workflows, context management, code review, and output validation.
