Summary

Full-Stack Engineer and Master's student in Artificial Intelligence at Universitas Syiah Kuala (USK), building web, mobile, AI, and production infrastructure systems. Currently I manage IT and web operations at LPPM USK, deliver full-stack work through Joki IT, and build Gilir as its founder and solo engineer. I work across product interfaces, backend systems, databases, deployments, monitoring, and incident response, with a focus on reliable delivery and clear ownership.

Education

Universitas Syiah Kuala

Master's Student in Artificial Intelligence, FMIPA USK

Aug 2026 – Present

Universitas Syiah Kuala

Bachelor of Informatics GPA: **3.74 / 4.00 (Cum Laude)**

2021 – 2025

- **Relevant Coursework:** Data Structures & Algorithms, Software Engineering, Web & Mobile Programming, Cloud Computing, Computer Networks.

Experience

Lembaga Penelitian dan Pengabdian kepada Masyarakat (LPPM), Universitas Syiah Kuala

IT Staff & Web Administrator (Contract)

Aug 2025 – Present

- Serve as the go-to IT person for the LPPM office, covering day-to-day technical needs such as OS installation, setting up accounts on new machines, and building small automations for office data, like auto-generating and emailing recap reports to each staff member.
- Hold full server access for publications.usk.ac.id, the platform hosting **90 active academic journals**, managing journal provisioning, account management for editors and reviewers, database maintenance, and front-end theming.
- Handled live security incidents from detection to resolution, including removing a gambling script injection from production, blocking unauthorized redirects, and rolling out post-incident monitoring across all journal systems.
- Built a server-level backup and monitoring system, with tiered daily full backups, 15-minute health checks, daily security audits, and a Telegram bot for interactive alerts; also led the full platform migration from OJS 2 to OJS 3 with zero data loss across all 90 journals.

Joki IT

IT Freelancer – Full-Stack Web & Mobile Developer

Jul 2026 – Present

- Deliver full-stack website and mobile work through Joki IT, implementing product interfaces, backend services, data flows, and integrations according to each project's requirements.

Badan Meteorologi, Klimatologi, dan Geofisika (BMKG) Aceh Besar

Full-Stack Developer Intern (KKP Academic Internship)

Jun 2024 – Jul 2024

- Spent the internship embedded with the BMKG Aceh Besar team, pitching in on whatever the team needed day to day. Built a web-based employee leave management system with real-time balance tracking and automated PDF approval letters, using React.js and Tailwind CSS on the frontend with an Express.js and MySQL backend.

Universitas Syiah Kuala

Practicum Instructor, Web Programming

Feb 2024 – Jun 2024

- Taught web development covering Linux fundamentals through HTML, CSS, JavaScript, PHP, Laravel, and Tailwind CSS, with course materials published at docs-pbw-inf-224.vercel.app.

Practicum Instructor, Software Engineering

Feb 2024 – Jun 2024

- Covered the full software development lifecycle using Mendix, Figma, Trello, GitHub, GitKraken, and StarUML, including grading assignments and running re-learning sessions for students who needed another pass at the material.

Practicum Instructor, DevOps

Jun 2024 – Dec 2024

- Guided students through CI/CD pipelines, Docker containerization, deployment to GCP, and backup management practices through hands-on labs and evaluations.

Bangkit Academy 2024 by Google, GoTo, Tokopedia, Traveloka

Mobile Development, Independent Study (Kampus Merdeka), Remote

Feb 2024 – Jun 2024

- Served as one of two mobile developers in a cross-functional capstone team of 7 (ML, Cloud Computing, Mobile), building the MediGuide Android app from Figma design through implementation and integrating the chatbot model handed off by the ML and Cloud Computing teams.

Projects

Gilir Next.js · TypeScript · Tailwind CSS · Supabase

- Founded and built a public-preview barbershop operating system for bookings, walk-ins, live queues, barber schedules, cash checkout, and daily operational reporting.
- Designed role-aware workspaces for owners, cashiers, barbers, and customers using Next.js and Supabase Postgres with Row Level Security. (*Active development – public preview*)

AIC 2026 WordPress · PHP · Tailwind CSS · JavaScript

- Redesigned and implemented the 2026 Annual International Conference website end to end as a custom WordPress theme using PHP, Tailwind CSS, and JavaScript.
- Built a responsive conference information structure for the annual event while preserving access to previous yearly editions and their content.

RWikiStat React Native · Expo · Firebase · AWS EC2 · R/Shiny

- Took over and optimized an undocumented web and backend codebase, then deployed its backend on AWS EC2 with server and domain configuration from scratch.
- Rebuilt the mobile app with Expo for iOS and Android, delivering learning modules, an in-app R/Shiny compiler, a discussion forum, and an AI chatbot; published on the Apple App Store.

Technical Skills

Languages: JavaScript, TypeScript, Python, PHP, Kotlin

Technologies: React.js, Next.js, Node.js, Express.js, React Native, Expo, Laravel, WordPress, Tailwind CSS, PostgreSQL, MySQL, Neon, Supabase, Drizzle ORM, pgvector, Firebase, Docker, AWS EC2, GCP, Clerk, TensorFlow.js, Git

Concepts: Object-Oriented Programming, RESTful API Design, Software Development Lifecycle, Cloud Computing, CI/CD, Database Administration

Organizations

Informatics Student Association, Universitas Syiah Kuala

Head of Student Welfare Management Department

Feb 2024 – Jan 2025

- Held full responsibility for 9 work programs as steering committee, overseeing planning through execution and stepping in to resolve issues as they came up. Led HMIF Farewell as the event's main organizer.
